TGR SERIES

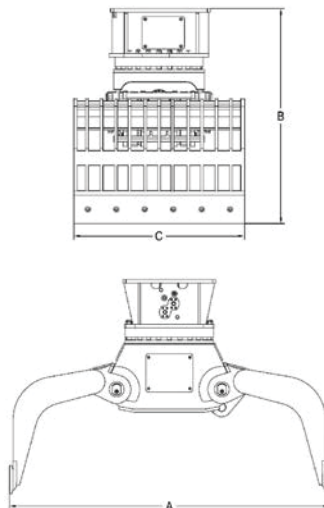

flexibility and multi-functionality

TOCDEM
ATTACHMENTS & UTILITIES

TocDem TGR grapples are made of particularly wear-resistant steels which allow the demolition of brick structures, timber and other types of materials. The particular design of our machines favours the selection of materials deriving from demolition in order to facilitate recycling and handling.

Additional highlights of this series include:

- 360° hydraulic rotation to guarantee precision placement.
a hydraulic cylinder synchronized to a piston rod system for facilitating homogeneous movement.
- Interchangeable blades.
- Different configurations of jaws to make demolition, selection and loading works.

Models:
